

A<sup>1</sup>  
(Cont'd)  
a sedimentation-state acquiring unit that can acquire the information about sedimentation-state of the liquid in the liquid chamber from the storage unit,  
wherein

the information about sedimentation-state of the liquid in the liquid chamber is  
information about a point of time that is a standard for judgement of the sedimentation-state.

---

38. (ONCE AMENDED) A liquid jetting apparatus according to claim 17, wherein:  
the liquid container further has a second liquid chamber that contains second liquid, the second liquid including a sinkable constituent,

A<sup>2</sup>  
the storage unit also stores information about sedimentation-state of the second liquid in the second liquid chamber,

the head member further has a second nozzle,

the apparatus further comprises a second liquid way that can communicate with the second liquid chamber of the liquid container set at the container-setting portion and the second nozzle,

the sedimentation-state acquiring unit can also acquire the information about sedimentation-state of the second liquid in the second liquid chamber from the storage unit, and

the information about the respective sedimentation-states of the liquid and the second liquid in the liquid chamber and the second liquid chamber is information about a point of time that is a standard for judgement of the sedimentation-states.
